Chakshit Gaur

New Delhi, India chakshitgaur25@gmail.com +91-9896910256 LinkedIn

Professional Summary

Python Developer with professional experience in Python programming, automation, and data processing. Strong foundation in object-oriented programming, SQL, database management, and problem-solving. Familiar with machine learning frameworks and data visualization tools, including TensorFlow, PyTorch, YOLO, and Power BI. Passionate about writing clean, efficient code and continuously learning new technologies.

Education

B.Tech (CSE) – 78% July 2019 — June 2023
D.P.G Institute of Technology and Management, Gurugram

12th Standard – 89% 2018
Shri Krishna Parnami Sr. Sec. School, Karnal

10th Standard – 9 CGPA 2016
V.P International School, Karnal

Work Experience

AI/ML Engineer May 2023 — June 2024
Isourse Technologies Pvt. Ltd., Delhi

• Designed and developed an Employee Management System(EMS) to monitor employee productivity, including keyboard tracking and idle time. Created an executable file for easy deployment and integration across systems. Ensured comprehensive functionality and provided detailed documentation and support for users.

• Developed an ATS using Selenium to extract LinkedIn data, ensuring GDPR and CCPA compliance. Designed a data storage solution with Python and SQL, and integrated with HR systems to streamline the management of over 5,000 applicants. Provided documentation and training for HR staff.

• Developed a project for FM Logistics to collect and process live stream data, including capturing and synchronizing two video files. Implemented a system to stitch videos based on matching timestamps, delivering a seamless combined video to users. Ensured efficient data processing and high-quality video output, enhancing the user experience.

Skills

Programming Languages : Python, SQL, Core Java

Libraries/Frameworks: Numpy, Pandas, Matplotlib, Selenium, YOLO, TensorFlow, PyTorch

SQL Databases: Oracle SQL, MySQL

Tools/Platforms: VS Code, Pycharm, Jupyter Notebook, Power BI

Projects

Multiple Disease Prediction System: Developed a multiple disease prediction system using machine learning algorithms for early detection of diseases like Parkinson's, Heart Disease, and Diabetes. Implemented logistic regression and support vector machines for predictive modeling.

Collaborative Filtering-Based Book Recommendation System: Built a collaborative filtering-based book recommendation system using Python. Leveraged libraries such as NumPy, Pandas, and Scikit-learn to preprocess and analyze book rating datasets, providing personalized recommendations based on user preferences and item similarities.

Extracurricular Achievements

• Gold Prize, Annual CSSRI Sports-meet, in Football and 100-M race

• Silver Prize, Intra college Kabaddi Competition
