PROFESSIONAL SUMMARY

Python Developer with experience in automation, web scraping and computer vision, having built an applicant tracking system for 5,000+ applicants, a client video processing system and an employee monitoring tool. Also experienced in Django web development, including building a multi-user Expense Tracker application. Skilled in Python, SQL, relational databases (MySQL, Oracle SQL), object-oriented programming and Git. Familiar with machine learning using Scikit-learn, TensorFlow and PyTorch.

SKILLS

Programming Languages	Python, SQL, Core Java
Web & Backend	Django, Django REST Framework, REST APIs
Databases	MySQL, Oracle SQL
Automation & Data	Selenium, Web Scraping, Pandas, NumPy, Matplotlib, Power BI
ML & Computer Vision	Computer Vision, OCR, Scikit-learn, TensorFlow, PyTorch, YOLO
Tools & Version Control	Git, GitHub, VS Code, PyCharm, Jupyter Notebook

WORK EXPERIENCE

Isourse Technologies Pvt. Ltd., Delhi May 2023 – June 2024
AI/ML Engineer

- Built the FM Logistics client video system in Python, using OCR and computer vision to synchronize two live-stream videos by timestamp and stitch them into one combined video.
- Built an Applicant Tracking System (ATS) using Selenium automation to extract applicant details for open jobs from LinkedIn and export them to CSV for HR; designed a data storage solution with Python and SQL, integrated with HR systems, to manage 5,000+ applicants; trained HR staff.
- Built an Employee Management System (EMS) that measures productivity by tracking keyboard activity and idle time; delivered as a standalone executable with documentation and user support.

PROJECTS

Expense Tracker Python, Django, SQLite

- Built a multi-user Django web app to log expenses by category, set monthly budgets with threshold warnings and track spending on a dashboard; each user sees only their own data.
- Added CSV import/export with per-row error reports and 43 automated tests (GitHub Actions CI).

Multiple Disease Prediction System Python, Machine Learning

- Built classification models using logistic regression and support vector machines to predict Parkinson's disease, heart disease and diabetes for early detection.

Book Recommendation System Python, NumPy, Pandas, Scikit-learn

- Built a collaborative filtering recommender in Python; preprocessed book rating datasets with NumPy, Pandas and Scikit-learn to generate personalized recommendations from user preferences and item similarity.

EDUCATION

B.Tech, Computer Science and Engineering – 78% July 2019 – June 2023
D.P.G Institute of Technology and Management, Gurugram

12th Standard – 89% 2018
Shri Krishna Parnami Sr. Sec. School, Karnal

10th Standard – 9.0/10 CGPA 2016
V.P International School, Karnal

ACHIEVEMENTS

- Gold Prize, Annual CSSRI Sports-meet, in Football and 100-M race
- Silver Prize, Intra-college Kabaddi Competition
